

Cybersecurity CyberSnack

Be a Good Digital Citizen

Technology can be fun, and the Internet can be a wonderful place to learn, shop, play games, and talk to friends. However, it is important to stay safe and secure when connected to the Internet. Today students learned some ways to stay safe and secure online. They also learned how cybersecurity workers help keep us safe and secure online. However, the cybersecurity worker cannot do it all themselves. It is important to make the cybersecurity worker's job easier. Students discussed how they could be great cybersecurity worker helpers. They learned to....

- only go to websites they know are safe, and when they have permission.
- keep their personal information, like their phone number and address, private.
- use strong passwords and not to share their passwords with others.
- log out of applications.
- not click on links or open attachments they are not familiar with, as they may contain malware.

Check out the video featuring Digital Dan and how he keeps Cyber City cybersecure.

Watch it together and ask...

- What digital devices would they have in their Cyber City?
- What superpower would they have as a cybersecurity worker helper?
